Journey of Indian Entrepreneurship

Yesterday, Today and Tomorrow
Constitution Club
Rafi Marg, New Delhi-110001

15 April, 2023

The Indian Entrepreneurship and our economy is set for its best run in over a decade as pent-up demand is unleashed. World had been observant on India's outlook, both from a cyclical and structural perspective, for some time. The recent strong run of success stories would boost confidence in youngsters that India is well positioned to deliver domestic demand alpha, which will be particularly important as developed market growth weakness percolates into Asia's external demand

"That is a fair point buy a fear, template has changed a lot in terms of the scenario; interest rates will only go higher; crude and energy costs have gone higher and demand has got crushed. This would change the framework of entrepreneurial mindset in time to come.

"The Economic Times, 19 November 2022"

Business Standard Predicts,

"India is likely to be the fastest-growing Asian economy in 2022-23, and expect it's GDP growth to average 7 per cent during this period — the strongest among the largest economies — and contributing 28 per cent and 22 per cent to Asian and global growth, respectively."

Scope

The key change in India's structural pattern would bank up on a clear shift in policy focus towards lifting the productive capacity of the economy. We have noticed that youth have taken the top agenda for the leaders to build their employability and skill to add productive capacity of the nation. Tomorrow's India will display entrepreneurs of great might spread across the world and also amidst growing population. We are the second largest populated country that is geared to increase the productive capacity of youth exponential-ly. The examples, stories and approach of development intervention would set a challeng- ing vision of enterprising India of tomorrow.
